Ovais Ahmad Khanday

Software Engineer

khanday.netlify.app
github.com/ovaiskhanday
linkedin.com/in/ovaiskhanday

Results-driven software engineer experienced in building **scalable backend systems** and **optimizing cloud infrastructure**. Skilled in **end-to-end API design**, reducing system latency, and delivering reliable, **high-impact features**. Strong **team collaborator** focused on driving measurable performance improvements.

SKILLS

Languages:	C/C++, Java, JavaScript, TypeScript, Python, SQL
Backend & APIs:	Node.js, Express.js, NestJS, RESTful API design, WebSockets, async/event-driven systems
Databases & Caching:	PostgreSQL, MySQL, Redis — schema design, indexing, query optimization
Cloud & DevOps:	AWS (EC2, CloudFront, SQS), Docker, Kubernetes, Nginx, GitHub Actions, CI/CD
Frontend:	Next.js, React, Tailwind CSS, Figma-to-code

WORK EXPERIENCE

Software Engineer
Cybermind Works

February 2026 — Present
Chennai, India (On-site)

1. GuardZapp (SaaS) — Realtime Security Operations Platform

<https://www.guardzapp.com/>

Node.js, NestJS, PostgreSQL, AWS SQS, Next.js, Docker, Kubernetes

- Security firms needed realtime visibility into guards on site (live location, attendance, and checkpoint patrols) from devices streaming continuous data, while payroll, billing, and SLA reports were compiled manually.
- Built NestJS services for live GPS tracking, geo-fenced attendance, and QR checkpoint scans with in-memory caching and PostgreSQL-backed processing; modeled incident and reporting data for severity-based alerts and automated reports; set up Docker, GitHub Actions CI/CD, Nginx/CloudFront, and a self-managed Kubernetes staging cluster on EC2.
- Automated payroll, billing, and SLA reporting across **200** client sites and lowered staging **infrastructure cost by 43%**.

2. SchoolNet (OneApp) — Education Platform

<https://www.schoolnetindia.com/>

Node.js, NestJS, TypeScript, PostgreSQL, React

- Student and admin portals used across **400+ centers** needed secure, fast APIs, and high-throughput endpoints were slowing down under heavy usage.
- Built student- and admin-side APIs and portal features; Found out and removed needless Cross joins in SQL and tuned PostgreSQL indexes.
- Cut API response latency by **40%** on high-throughput endpoints, serving **400+ centers and millions of students** across India.

3. Finangl — Web Scraping Service

<https://play.google.com/store/apps/details?id=com.finangl.app>

Node.js, Nestjs, PostgreSQL, Flutter, AWS EC2

- The web scraping service on AWS EC2 was hitting **100% CPU** under sustained load and repeatedly crashing, interrupting data collection.
- Investigated the crashes using logs and metrics, recreated the failure under matching load to reproduce it, identified excessive parallelism as the root cause, and tuned concurrency to fit instance capacity.
- Identified bottlenecks and **reduced CPU usage from 100% to 12%**. Reduced the weekly manual production incidents analysis from **100 tickets to 40 tickets**.

SDE Intern

August 2025 — February 2026

Cybermind Works

Chennai, India (Hybrid)

- Rapidly developed and deployed backend MVPs in a fast-paced Agile environment, collaborating closely with team members through active code reviews to maintain system reliability.

PERSONAL PROJECTS

Teamtax - someone owes someone a treat

<https://teamtax.app>

Node.js, AWS EC2

- Built and shipped a full multi-tenant web app used by real teams, where each company's data is fully isolated from every other, with owner/admin/member permissions and a separate admin console for managing organisations.
- Designed and delivered the complete product end to end, sign-up with email verification, password reset, photo uploads, notifications and an insights dashboard, backed by an automated test suite covering access control and data privacy.

EDUCATION

Master's of Computer Applications - (9 CGPA)

2026

University of Kashmir

Kashmir, India

Bachelor's of Computer Application - (9 CGPA)

2024

Govt. Degree College Anantnag

Kashmir, India
